

May 2010

The International Commission on Non Ionizing Radiation Protection has published a note on the publication of the Interphone study.

The note concludes: "ICNIRP recently published a review of the scientific evidence on the health effects of radio frequency exposure from mobile phones. We found the existing evidence did not support an increased risk of brain tumours in mobile phone users within the duration of use yet investigated. The subsequent publication of the Interphone study has added greatly to the volume of evidence available. ICNIRP believes on preliminary review of the results, however, that they do not change the overall conclusions. ICNIRP therefore considers that the results of the Interphone study give no reason for alteration of the current guidelines."

The note can be found at <http://www.icnirp.de/documents/ICNIRPnote.pdf>
